

FREQUENTLY ASKED QUESTIONS

What are Eyelash Extensions? Eyelash extensions are semi-permanent synthetic fibers used to create more volume while lengthening and extending the natural eyelashes.

Classic Eyelash Extensions - one single extension is placed on one natural eyelash.

Volume Eyelash Extensions - customized hand made fans are designed and made for each natural eyelash and applied one by one to each individual natural lash

How long do Eyelash Extensions last? This will depend on several factors, the biggest one is how well you maintain your lashes. To maintain your lashes fill appointments are necessary every 2 to 4 weeks to replace the lashes that have shed or outgrown naturally.

We always advise that after the initial set of extensions a fill should be done at 2 weeks as they may have lost or shed more than normal due to the time of their shed cycle.

What are Our Eyelash Extensions made of? Eyelash extensions are made of a premium synthetic material called PBT. (Polybutylene Terephthalate (PBT). PBT is a synthetic semi-crystalline engineered thermoplastic or is a thermoplastic engineering polymer. All lashes, whether they are called Synthetic Mink, Synthetic Silk, Supermink, etc... are made of this material
